DAHLIADEL INTRODUCTIONS 1950

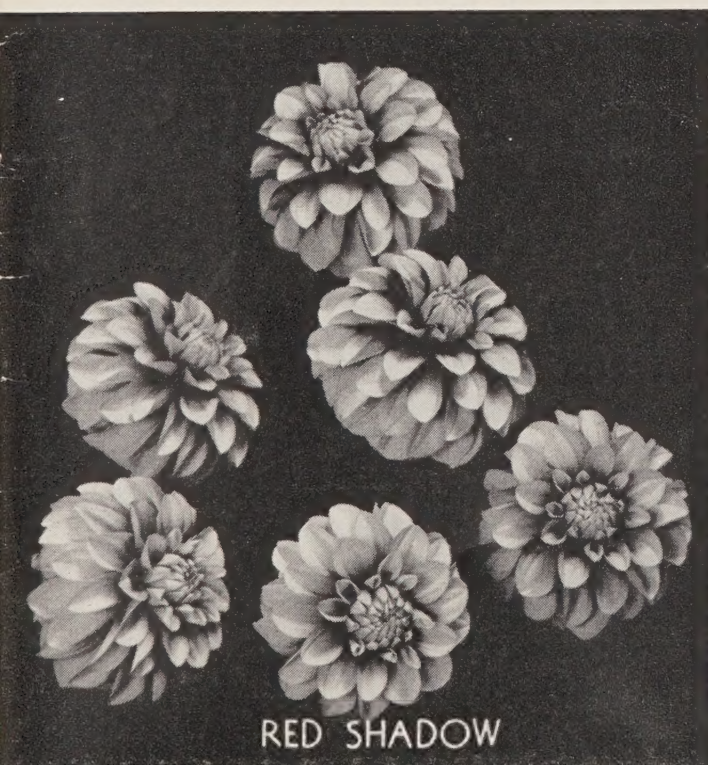

NIBS

NIBS (Allewa-Dahl 86M), M FD, Bloom $2\frac{1}{2}$ - $3\frac{1}{2}$ x 2, Bush 3-4 ft. An adorable yellow Miniature that we are introducing because of its satisfactory performance in all the Trials where I saw it at Rutgers, Maryland and Georgia. Its productiveness of blooms, and suitability for exhibition makes it a "must" in every garden. By certifying at Georgia and Maryland this season and Rutgers in 1948 it wins the Derrill W. Hart Memorial Award with an average score of 85.2. The color is light primrose yellow with Tyrian rose suffusion in the center, and such a gem for arrangements. Wonderful stems and spreading bush growth. Most pleasing.

Trophy and Silver Medal Certificate in the seedling class at New York, 3 Firsts and Tri-Color for the most outstanding Miniature at Long Island Show, and Best Miniature in the N. J. ORDER EARLY

Early orders will help us in booking your order and reserving the stock for you and thus schedule it for the proper shipping time. Do not send us an order at the height of our shipping season and expect delivery in 3 to 5 days. The orders booked weeks and months ahead that are scheduled for specific shipping dates will go out first and the last minute orders will follow as soon as we can get them off.

On late orders, kindly give a second choice. Owing to the shortage of stock, on some varieties, kindly indicate on your order whether or not you want us to substitute.

ROOTS

Dahlia roots are divisions of field grown clumps. Each root must contain at least one "eye" from which the plant grows. Sturdy stalks or plants and fine exhibition flowers grow from roots, and strong clumps harvested for the following season. As the planted root acts as a food storehouse for the growing plant, the growth of the plant is thus stabilized under adverse growing conditions.

POT ROOTS

Pot roots are small clumps produced by plants grown mostly in 3" pots in the open during the late Summer, and transferred in the Fall to greenhouses where they are grown under controlled conditions, and allowed to ripen naturally by the end of December. Pot roots should not be judged adversely because of their size, as they will produce bushes and flowers equal to roots, and in many varieties even better clumps on digging. Many experienced growers prefer pot roots.

GREEN PLANTS

Green plants are sprouts or cuttings taken from clumps grown in especially built greenhouses; rooted in sand benches in air-conditioned propagating houses; potted and grown under greenhouse conditions until well established and then moved to cold frames for proper hardening off. When they reach you they are ready for planting, after unwrapping.

Our customers have found them highly satisfactory and they are considerably cheaper than roots in the high priced varieties.

Green plants will produce flowers equal to roots or pot roots when well grown for exhibition, but will not produce as large clumps for the following season. When properly grown, however, many varieties will produce nice clumps.

Dahliad green plants, in our specially designed shipping box, have been successfully sent all over the United States. However, shipments of dahlia plants to California, Oregon and Washington have been so delayed by their present inspection facilities that we do not recommend dahlia plants or cuttings for that territory. See "Notice on Green Plant and Rooted Cutting Shipments," page 32.

ROOTED CUTTINGS

Rooted cuttings are sprouts or cuttings grown exactly as described under green plants (see above) up to the point where a good root system has developed. Rooted cuttings are wrapped singly or two together in live sphagnum moss on a special machine built for this work. In shipment the roots are fed moisture in live sphagnum. The leaves are in a ventilated air space. This insures the best and safest transportation. **Rooted Dahlia cuttings are 1/3 less in price than plants.** However, we do not recommend them unless you have had experience and are equipped to handle dahlia cuttings.

UNIFORM COLOR STANDARDS

Much has been accomplished in Color Nomenclature and Classification the past two years. Dahliaedel Pocket Edition has been completed and used in practically all the large Dahlia shows. The color classes, as arranged in our Pocket Edition, as well as size and type classes have been approved by the American Dahlia Society and the Central States Dahlia Society. This will simplify judging throughout the country.

DAHLIADEL POCKET EDITION of the HORTICULTURAL COLOUR CHART contains 175 color blocks arranged in the spectrum order, primarily for the American Dahlia Society with a definite color range on each set of pages. Autumns have been added to make the color range more complete. It is a complete chart for other flowers with the addition of violets, and the omission of the greens and a few blues.

Darker shades are in columns to the right with lighter tints to the left. Pages are covered with Cellophane and in a standard 6¼ x 3¼ binder. **Pocket Edition in Loose Leaf Binder, \$15.00.**

HORTICULTURAL COLOUR CHART (Published by the Royal Horticultural Society of England)

This Chart is in two volumes with 100 loose sheets in each, and four color tones on each sheet. It has the most complete range of colors with the exception of autumns which have been added in the Dahliaedel Pocket Edition. It has the best colors of any Chart published for Horticultural use. The color names are nearly all in common usage.

ORCHID FLOWERING DAHLIAS

This type of dahlia is most interesting, and popular for landscape effects, table decorations or graceful, airy arrangements. The bushes are compact, free blooming and prolific. Most of the flowers are 4 to 5 inches in diameter, and bushes are 2 to 3 feet in height except where noted. Wonderful for landscape effect when pinched out once, but should not be thinned out nor disbudded. If Collarette, Orchid Flowering and Single dahlias are cut before the pollen shows, they will hold their petals and keep for days.

DAHLIADEL RECOMMENDATIONS

For Exhibition or Your Garden

If you were at Dahlia del and asked me to check a list of the most satisfactory varieties of dahlias for you to grow, you would probably say you wanted varieties that are not temperamental. Then you would ask for those easy to grow, that produce plenty of flowers good for cutting; house decoration, and exhibition —oh yes, you would want some of the big ones too that will be the envy of the neighborhood. Well, here they are.

With this table of recommended varieties you can pick the types and colors you like most. Where there is more than one, the top variety is the newer and likewise the higher priced one. Practically all of the varieties have won prizes at Shows or Trial Grounds, and will do it again if properly grown and exhibited.

HARDY GARDEN CHRYSANTHEMUMS

These modern hardy mums are selected for their ability to produce quantities of blooms in general garden conditions. Increasing interest in garden mums is due to recent development of new varieties that bloom safely ahead of frost, while a number of varieties stand the first frost that usually gets the Dahlias. This prolongs the blooming season in your garden by several weeks.

ENGLISH

This new race has the advantage of combining size with hardness.

We have, however, culled our English Varieties down to the 8 that are really hardy, grow well, and produce blooms of equal general quality with the best American varieties. They can be grown much larger than sizes indicated if disbudded the same as Standard Greenhouse Varieties.

CHRYSANTHEMUM CULTURE

Plant in well prepared ordinary garden soil 8 to 10 inches apart, in rows 15 inches apart for mass planting. Rows can be 3 to 4 feet apart for cultivating. Either work in manure in the fall or winter or use a good garden fertilizer worked into the soil two weeks or more before planting. Side-dress early in July and again in August. Do not let mums suffer for water. Pinch out soft center when plants are about 6 inches tall and again when lateral branches have made a good growth, but not after August 1. For aphids, thrips or other insects use BHC and Hexate spray recommended on page 32.

Protect your late blooming varieties with a suitable covering of muslin, paper or burlap the first frosty nights. This will give you two or more weeks of color in your garden.

INSECTICIDES

INSECT CONTROL

Since the use of DDT much more red spider and mite have been prevalent on dahlias. We have used DDT, nicotine sulphate, rotenone, and pyrethrum in a spray with fair results. Have used DDT with Hexate with fairly good results but we could not recommend either of these sprays to our customers as they gave only a partial control.

A NEW INSECT CONTROL

We have obtained exceptional results, practically 100% insect control with one application of the following spray: **2 heaping tablespoonsful of 50% wettable BHC** in combination with **1/3 teaspoonful TAT Hexate** and **1/2 teaspoonful LINCK WA** to each gallon of water. Use the same precaution as when spraying with nicotine sulphate. This we feel sure will control the red spider, aphids, mite, and thrips along with practically all the other troublesome insects with the possible exception of the European Corn Borer.

TAT BHC contains the new outstanding chemical Benzene Hexachloride. This product acts as a contact, stomach and fumigant insecticide. It is up to 15 times as toxic to certain insects as DDT yet only 1/5 as toxic to warm blooded animals. Exceptionally effective against sucking bugs, aphids, leaf-eating insects (even killing the egg), wireworms, thrips, scale, grasshoppers, locusts and ants. It does not have the long residual effectiveness of DDT due to its fumigant action, however, this is advantageous in that it reduces the danger of any long lasting residue. **1 1/2 lbs BHC, \$1.75 postpaid,** including 4th zone. Add 5c for each additional zone. **5 lbs BHC \$5.00 postpaid** including 4th zone. Add 10c for each additional zone.

Although it has a somewhat objectionable odor, the results are so far ahead of anything else that you gladly tolerate the musty odor.

TAT HEXATE is a newly formulated compound containing Hexaethyl Tetraphosphate and a wetting, spreading agent. Replaces nicotine sulphate in controlling aphids; also excellent for control of plant mites (such as red spider), and other insects. **6 oz. bottle Hexate, \$2.25 Postpaid.** Only **\$2.00** when ordered with BHC.

We also add Linck WA a superior wetting agent when using low pressure for spraying. **6 oz. bottle 50c, 16 oz. bottle \$1.00,** when ordered with above.

TAT 16 page Manual on Insect Control **Free on Request.**

CORN BORER DUST (Nicotine Bentonite Dust). 4% actual nicotine content with wetting agent added. Four to five applications should be made at five to six day intervals, starting at the time of the first eggs' hatching. Five pounds should take care of 100 to 150 dahlia bushes for four ap-

plications (size of bush will vary amount needed). Directions with each package. **5 lbs. Postpaid,** including 4th zone, **\$2.50;** add 10c for each zone beyond 4th; **25 lbs., express collect, \$7.50.**

PYRETHRUM SOAP. A non-poisonous insecticide effective on most insect life and not injurious to animals or plants. Will not burn foliage or buds. A desirable spray for aphids and for thrips and leafhoppers when used with Black Leaf Forty. Four ounces make 4 to 5 gallons of spray. **Postpaid,** including the 4th zone, **4 oz., 60c; 16 oz., \$1.60; quart, \$2.50; gallon, \$8.00.**
